DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 1, 2, 13, 14 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Willof et al. (US Patent 5625399).

Wiklof et al. discloses a method comprising steps of:

(A) computing an input energy to provide to the print head element based on a current temperature of the print head element and a plurality of one-dimensional functions of a desired output density to be printed by the print head element (current, past and future activities of the print head element); and

(B) providing the input energy to the print head element.

See Col. 10, lines 10-20.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 3, 4, 5, 15, 16, 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wiklof et al. in view of Palmer (US Patent 4391535).

Wiklof et al. does not teach or suggest that the current temperature of the print head element comprises a predicted current temperature of the print head element, the predicted temperature is predicted based on the ambient temperature and an energy provided to the print head element.

Palmer teaches a method and apparatus for estimating the temperature of a print head element using the ambient temperature and an energy provided to the print head element.

Art Unit: 2861

It would have been obvious to one of ordinary skill in the art at the time the present invention was made to combine the teachings of Wiklof et al. and Palmer to control the input energy provided to a print head element.

Allowable Subject Matter

5. Claims 6-12, 18-22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. Claims 23-50 are allowed.

Response to Arguments

7. Applicant's arguments with respect to rejected claims have been considered but are moot in view of the new ground(s) of rejection.
